

BlueSpice 4.3: The new product features

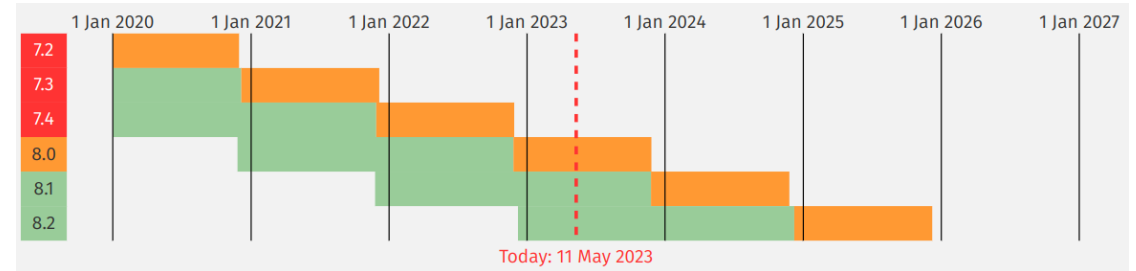

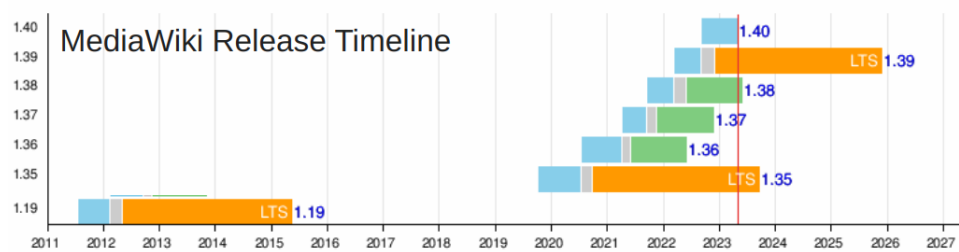

Agenda

1. Compatibility with **MediaWiki 1.39 LTS and PHP 8.x**
2. Enrich pages via **ContentDroplets**
3. Create hierarchical navigation using the advanced **MenuEditor**
4. A new page sharing engine: **ContentStabilization**
5. Remarkable **bugfixes** and **improvements**

Compatibility with MediaWiki 1.39 LTS and PHP 8.x

1.31	1.32	1.33	1.34	1.35	1.36	1.37	1.38	1.39	master
									8.1.0+
									8.0.0+
				7.4.3+					
7.3.19+									

Compatibility with MediaWiki 1.39 LTS and PHP 8.x

Objective

Continuing LTS strategy

Maintain a stable platform

Hard facts

Compatibility to supported versions of PHP

Better performance

Less resource utilization

Updated (new) MediaWiki core and extension features

Long term support

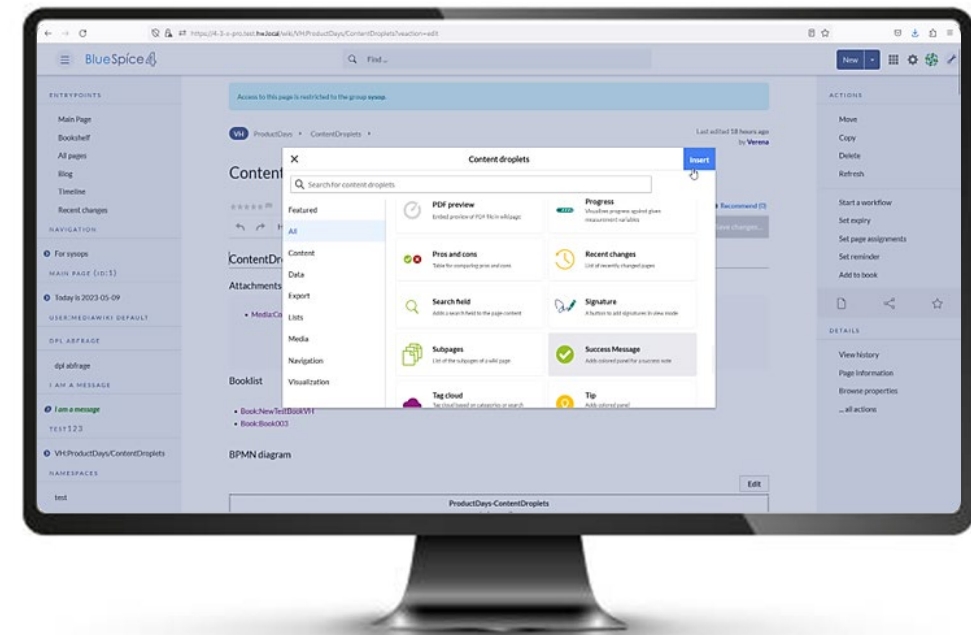

Enrich pages via ContentDroplets

Objective

- By introducing the „ContentDroplets“ feature, users should have an **easy and quick way** to add items to the page content
- This includes **tags, parser functions** and **templates**
- The purpose is to unify the **user experience**

Hard facts

- Total of 53 ContentDroplets
- Split between BlueSpice free and BlueSpice pro
- InsertMagic will be replaced by ContentDroplets
- Logical categorization but also a search option is available

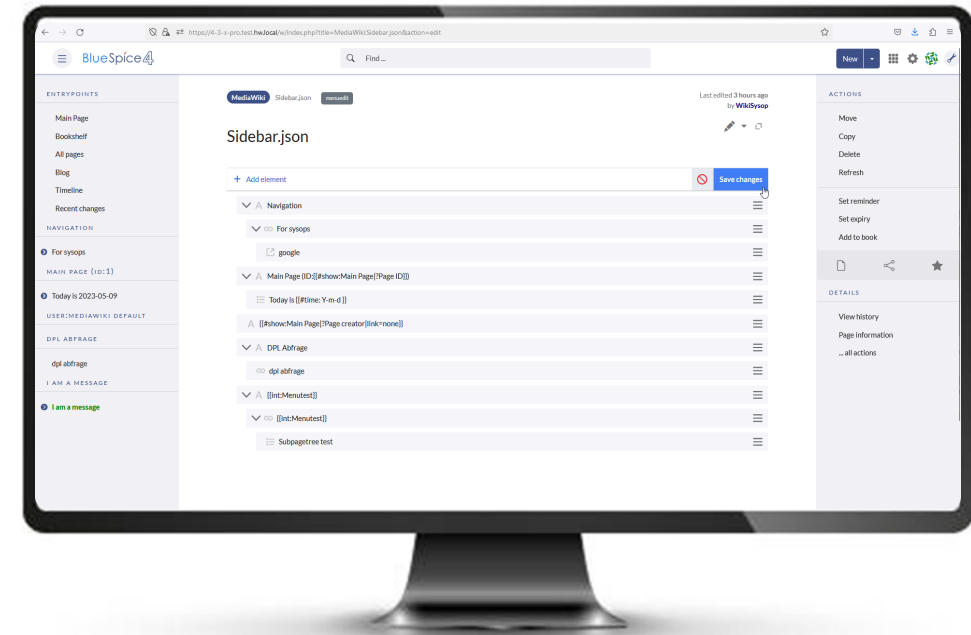

Create hierarchical navigations using the advanced MenuEditor

Objective

- Further improvement of the **MenuEditor**
- The focus was mainly on **nested structures**, which can be **easily implemented by the end user via UI**
- The UI itself has also been adjusted with a more **lightweight and clear styling**

Hard facts

- Total of 4 modes for the left sidebar
- Available from BlueSpice free
- Further functionalities:
 - Easy restriction of panels or individual elements to groups possible
 - Definition of CSS classes for elements

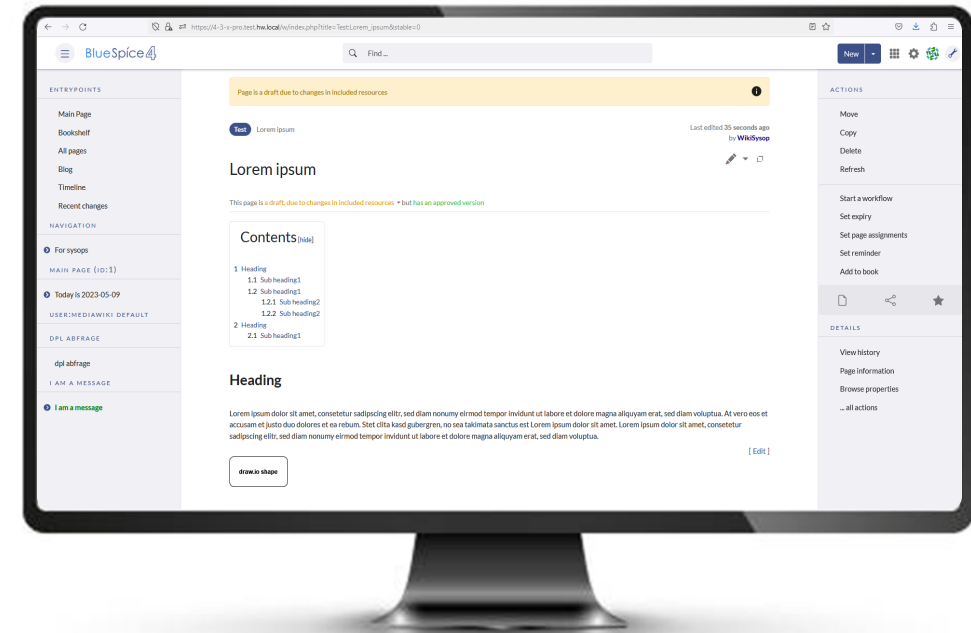

A new page sharing engine: ContentStabilization

Objective

- Wikimedia Foundation removed vital functionality from FlaggedRevs
- Hard to configure and maintaining
- **Drop-in replacement** of FlaggedRevs
- **Better maintainability** and tailored to the **needs of our customers**

Hard facts

- Available from BlueSpice pro
- FlaggedRevs will be replaced by ContentStabilization

Remarkable bugfixes and improvements

Bugfixes and improvements

- Copy & Paste from MS Word and MS Excel
- Links in draw.io diagrams
- Deletion of subpages
- Configurable position of meta data
- Configuration of drag and drop when inserting a file
- Tagging of templates

Changes and improvements

- Start page templates
- UI changes for MenuEditor, Grids (QM overview)
- WCAG
