FEATURE OVERVIEW AND ROADMAP

What's new in BlueSpice Galaxy

BlueSpice Galaxy is the next generation of BlueSpice. It keeps the proven wiki foundation and adds what large organizations need to run knowledge management at scale: subwikis as standard, a cluster-ready architecture, and new tools for collaboration, document control and integration.

This overview shows which features are new in Galaxy, which existing BlueSpice features have been enhanced, and what is planned for 2027. As with every BlueSpice edition, all features are part of the subscription: there is no app marketplace and there are no per-plugin costs. The software is open source under GPL-3.0 and runs in the BlueSpice Cloud or on your own infrastructure.

49
features in this overview

- **Available Now in Galaxy** — Included in the Galaxy release
- **Enhanced** — Existing features, improved
- **Roadmap 2027** — Planned for delivery in 2027

KEY DATES

Oct 13, 2026
Public Galaxy demo online

Nov 13, 2026
Galaxy cloud release

Q1 2027
On-premises release and new features

2027
Further roadmap features roll out

Coming in Q1 2027, with the on-premises release

- **PageConstraints** — Control access to individual pages
- **Office File Handler** — Preview and interact with Office files in the wiki
- **Ticket connector** — For issue management systems such as Easy8 and OpenProject
- **Visualized statistics** — The wiki's performance, visualized with Grafana
- **Appointments** — A basic calendar for events and teams
- **Archive** — Flag pages as archived

Galaxy is released in the cloud first. The on-premises release, including the Helm chart, follows in Q1 2027. Roadmap dates are planning targets and may change.

Feature overview

Available Now | Enhanced | Roadmap 2027

Platform and architecture

3 features

Subwikis (workspaces) as standard	Available Now
Container architecture with cluster support	Available Now
Large-scale setups	Available Now

Content and editing

8 features

Page layouts, excerpts, status and more	Available Now
Spreadsheets, charts and visualizations	Available Now
Page metadata management (NeoWiki)	Available Now
Simultaneous editing	Enhanced
Pivot tables	Roadmap 2027
Tables with SQL support	Roadmap 2027
Markdown support	Roadmap 2027
Office File Handler	Roadmap 2027

Navigation and search

5 features

Easy navigation through subwikis	Available Now
Enhanced menus for pages and subpages	Available Now
Search across subwikis, respecting user permissions	Available Now
Page navigation customizable by drag and drop	Roadmap 2027
Saved and reusable search criteria, date-based search	Roadmap 2027

Permissions and security

3 features

Simple rights management across subwikis	Available Now
Create and manage additional subwikis	Enhanced
Page constraints / page restrictions	Roadmap 2027

Document control and compliance

9 features

Page versions	Available Now
Page ownership	Available Now
Page checkout	Available Now
Wiki automation	Available Now
Workflows and document control	Enhanced
Read confirmation	Enhanced
Archive	Roadmap 2027
Versions of entire document units and page structures, with comparison	Roadmap 2027
Batch actions: rename, copy and delete multiple pages, respecting access restrictions	Roadmap 2027

Feature overview (continued)

Communication and collaboration

7 features

Central watchlist and notification center	Available Now
Shared files and templates across subwikis	Available Now
Inline comments	Available Now
Minutes	Available Now
Tasks across subwikis	Enhanced
Event calendar	Roadmap 2027
Central announcements in all subwikis	Roadmap 2027

Import and export

3 features

Subwiki export (PDF)	Available Now
DOCX export	Roadmap 2027
Full wiki export (PDF and re-import format)	Roadmap 2027

Integrations and interfaces

11 features

Webhooks	Available Now
MCP server interface	Available Now
Versioning with git	Available Now
Visualized statistics and reports	Roadmap 2027
iFinder search	Available Now
PlantUML via draw.io	Available Now
OpenProject	Roadmap 2027
Easy8	Roadmap 2027
Other ticket systems	Roadmap 2027
Whiteboard (e.g. Conceptboard)	Roadmap 2027
KIPITZ	Roadmap 2027

Proven features from BlueSpice 5

Galaxy builds on BlueSpice 5. These 44 standard features carry over, so existing users keep the tools they already know. Availability of some features depends on the Galaxy plan.

Editing

- ✓ Visual editor (WYSIWYG)
- ✓ Source editor with syntax highlighting
- ✓ Content droplets: lists, tabs, videos, PDFs and more
- ✓ Diagrams with draw.io and BPMN
- ✓ AI editing assistant

Content structure

- ✓ Page hierarchy with subpages
- ✓ Books
- ✓ Page templates
- ✓ Templates with dynamic content
- ✓ Portal and start page templates
- ✓ Forms
- ✓ Category system

Search and usability

- ✓ Integrated OpenSearch
- ✓ Navigation menu editor
- ✓ Responsive design, adaptable to your CI
- ✓ Drag-and-drop file upload

Quality assurance

- ✓ Unlimited version history
- ✓ Visual version comparison
- ✓ Drafts and page approvals
- ✓ Lua script support

Communication and collaboration

- ✓ Blog
- ✓ Page comments
- ✓ @-mentions
- ✓ Checklists

Multilingual and AI

- ✓ AI chatbot with your own LLM
- ✓ RAG pipeline
- ✓ MCP Gateway
- ✓ Ad-hoc page translation (DeepL)
- ✓ Translation transfer between wikis (DeepL)

Import and export

- ✓ PDF export with custom templates
- ✓ Word import
- ✓ XML and CSV page import and export
- ✓ Content transfer between wikis

Security and data protection

- ✓ Single sign-on (SAML, OpenID Connect, LDAP)
- ✓ Two-factor authentication
- ✓ Configurable password policies
- ✓ EU GDPR features
- ✓ Local accounts
- ✓ Audit logs

Integration

- ✓ Chat integration (Teams, Slack, Rocket.Chat)
- ✓ Issue tracker links
- ✓ GitHub and Bitbucket content embedding
- ✓ Matomo web analytics
- ✓ REST API
